

DOWN THE MEMORY LANE

Some of the beneficiaries of the pension anomaly case judgement may not be remembering how their pay was converted from CDA to IDA scales 20 years ago. To help them we have given in our CHQ Website as well as Whatsapp groups the corresponding pay scales in CDA and IDA. How to use them?

1. Ascertain first from your PPO the Pay Scale and the Basic Pay on date of your retirement and how your average emoluments for last ten months were calculated.
2. Then refer the Conversion Table of the concerned Pay Scale.

TWO EXAMPLES:

.....
(i) **Mr. X was in NE 11.** CDA: 6500-200-10500
IDA: 8570-245-12245

He retired on 30th November 2000. His last increment was from June 2000. His Basic Pay during February-May 2000 was Rs. 8500 and from June to November 2000 it was Rs 8700. Average emoluments calculated as:

$$8500 \times 4 = 34000$$

$$8700 \times 6 = 52200$$

$$\text{Total : } 86200. \quad \text{Average for 10 months: } 7620 \text{ in CDA}$$

His Basic Pension was originally fixed at 4310 (50% of 8620). In 2002, his pay was converted into IDA and fixed at Rs 11265 from 1-10-2000. Then emoluments for 10 months were recalculated for pension as:

$$\text{February -May 2000: Rs } 8500 \times 4 = 34000$$

$$\text{June to September: Rs } 8700 \times 4 = 34800$$

$$\text{October-November: Rs } 11265 \times 2 = 22530$$

$$\text{Total for 10 months: Rs. } 91330 \quad \text{Average: Rs } 9133.00$$

Revised Basic Pension: Rs 4567.00

Now, his Pay has to be notionally converted from February 2000 as

$$\text{February-May 2000} = 11020 \times 4 = 44080$$

$$\text{June to November 2000: } 11265 \times 6 = 67590$$

$$\text{Total for 10 months: } 111670, \quad \text{Average: } 11167$$

$$\text{Basic Pension (new)} \quad 5583.50 = \text{to be } 5584.00$$

BENEFIT: 5584-4567 = 1017.00 + DA

.....

(ii) Mr. Y also retired on 30-11-2000 while drawing basic pay of Rs 8700 in NE 11 Scale of 6500-10500. His Date of last increment was in February and so he got Rs 8700 for all the last 10 months of his service. Average emoluments was also Rs 8700. He was granted Rs 4350 as basic pension in CDA

In 2002, his pay was converted into IDA and fixed at Rs. 11265. Thereafter average emoluments for fixing pension was rer-calculated as:

$$8700 \times 8 = 69600$$

$$11265 \times 2 = 22530 \text{ Total } 92130, \text{ Average Rs } 9213.$$

Basic Pension was revised then as Rs. 4607.

Now his Basic pay should be notionally revised and fixed at Rs 11265 from February 2000 onwards. So average emoluments should be Rs 11265 and he is entitled to revised basic pension of Rs 5633 from December 2000 onwards.

BENEFIT : 5633-4207= 1026 + DA

Hope all the beneficiaries can calculate and find out their benefits like above.

ARREARS:

In the first example, he may get arrears of Rs **822000**

In second example; he may get arrears of Rs **830000**

CONGRATULATIONS

In our Website we have given Nine Tables in Excel format for calculating arrears also. Table 1 for those who retired on 31-10-2000, Table2 for those who retired on 30-11-2000 etc...You have to select the Table for the month you retired, then just enter two figures; Revised basic pension granted in 2002 (shown as **5000** in red colour) and new basic pension entitled to now (shown as **6000** in red colour). Arrears will be approximately 810 times of the difference between the two if retired in October 2000. It will decrease gradually every month.

Note: One case has come to us where the Pensioner was granted some upgradation in pension in 2011 to ensure minimum pension of Rs 3500. In such cases the above calculation table cannot be used. Arrears depend upon pension and DR already drawn.
